Queensland Urban Utilities (QUU) was named the winner of the Industry Award at the 2012 Healthy Waterways Awards for the recently completed upgrade works on Canungra Sewerage Treatment Plant designed and constructed by Aquatec Maxcon.

The Industry Award category was open to industry sectors such as manufacturing, commerce, development and retail groups for projects aimed at improving the management of water, or the state of waterways.

As a result of the plant's new technology, the discharge into Canungra Creek will have minimal impact on the environment, which exemplifies Aquatec Maxcon’s and QUU's commitment to excellence in project outcomes and environmental management.

Congratulations to all staff who were involved with the project.
