

Flinders Shire Council recently awarded Aquatec Maxcon the Design and Construct Contract for the Hughenden Sewage Treatment Plant.

With a flow rate of 520kL/day, the new plant will have SBR Lagoons complete with Aquatec Maxcon [Surface Aerators](#) and Decanters as well as Inlet Works, Chemical Dosing, Sludge Drying and Chlorine Disinfection.

The Hughenden Sewage Treatment Plant will be delivered using the Aquatec Maxcon Group's vertically integrated capabilities with design, process, mechanical, civil and electrical works all being done in-house.

We look forward to delivering a successful project for Flinders Shire Council.
