

The Anammox process removes nitrogen from wastewater in a cost effective way. Anammox offers great advantages compared to conventional nitrogen removal processes including:

- Power consumption is reduced by up to 60% as compared to conventional nitrification/denitrification methodology.
- No additional carbon source needed.
- Overall operational cost reduced by up to 90% compared to conventional nitrification/denitrification methods.
- CO₂ emission reduced by approximately 88%.
- Plant foot print ~50% of conventional plants.
- Proven in full scale plants.

This innovative process is patented and supported by Paques BV of The Netherlands.

The Process:

Anammox Bacteria:

The Anammox process (for Anaerobic ammonium oxidation) removes ammonium without oxygen and with nitrite as the electron acceptor. The cost of conventional ammonium removal via nitrification-denitrification from sludge reject waters is mainly associated with aeration-cost and the addition of an expensive electron donor (e.g. methanol). The Anammox® process provides an alternative for the nitrification, with no requirement for an extra electron donor. The (generalised) overall reaction of the One Step Anammox process is:

Also, the emission of greenhouse gases is enormously reduced using the Anammox process. The overall CO₂ emission of a wastewater treatment plant can be reduced by approximately 88% because the Anammox process itself consumes CO₂. Furthermore, the production of nitrous oxide (N₂O) that can easily be formed as a by-product of conventional denitrification is not emitted using the Anammox process.

Potential Applications:

- Sludge

- digeste
r centr
ate
- Slaugh
terhou
ses/Re
nderin
g
Plants
- Distille
ries
- Potato
Proces
sing
- Semi-
Condu
ctor In
dustry
- Tanner
y
- Ferme
ntation
- Glutam
ate
- Enzym
es
- Ethano
l
- Yeast
- Fertiliz
ers

Product and Services:

In cooperation with Paques BV, Aquatec Maxcon can provide a full scale solution for suitable high ammonia streams using the Anammox technology. We can also provide a pilot plant to test your effluent with the technology.

Please contact us for any queries regarding Anammox..
